

1. write a python script to remove the last digit from a given number.

```
x=3456
x=x//10
print(x)
```

2. write a python script to get the last digit from a given number.

```
x=2349
x=x%10
print(x)
```

3. write a python script to swap data of two variables.

```
a=30
b=40
a=a+b
b=a-b
a=a-b
print(a,b)
```

4. write a python script to find x power y, where values of x and y are given by user.

```
x=int(input("enter the value of x"))
y=int(input("enter the value of y"))
print(x**y)
```

5. write a python script which takes a three digit number from the user and displays only its first digit.

```
x=int(input("enter the three digit number"))
x=x//10
a=x
a=a//10
print(a)
```

6. write a python script which takes a three digit number from the user and displays only its middle digit.

```
x=int(input("enter the three digit number"))
x=x//10
a=x
a=a%10
print(a)
```

7. write a python script which takes a three digit number from the user and displays only its last digit.

```
x=int(input("enter the three digit number"))
```

```
x=x%10  
a=x  
a=a%10  
print(a)
```

8. write a python script to use in operator to display the data present in the list.

```
x=[20,67,12]  
y=20  
print(y in x)
```

9. write a python script to use not in operator to display the data not present in list.

```
x=[20,23,56]  
y=23  
print(y not in x)
```

10. write a python script to use is operator to display if both variables are the same object or not?

```
x=20  
y=21  
print(x is y)
```
